

The IDA Newsletter #27, February, 1996 had the following article, written by Dave Crawford, PhD.

### **“Full Cut-off Sports Lighting”**

“Soft™ Lighting Systems, based in Seattle, WA, has now begun to market a full-cut sports lighting fixture. It has essentially no glare and very minimal spill light. We have been pushing this approach to industry for some time, and this company has now met the challenge. I have seen a recent installation in Bellevue, WA and it is a **wonderful** (my emphasis) improvement over most all present day installations. The lighting on the field, for players and spectators, is as good or better than any previous sports lighting, and the glare and spill light are remarkably less. . . .

. . . . We hope to see such quality lighting sprouting up everywhere! It is a prime example of our thesis that everybody wins with well designed quality outdoor lighting.”
